# 135844 MERCY MACHARIA

## GROUP A

Below are the reasons for my design choices

1. Responsiveness. Using HTML and CSS on the code enhanced the ability to customize the appearance and content dependent on the screen size of the device using CSS
2. Accessibility. HTML and CSS have design tools that are accessible and easy to use such as color, fonts, images and links.
3. Flexible. Many actions can be taken when using CSS and HTML such as dropdown menus, inserting images, inserting a fillable form and directing one to another page or media

Challenges faced

1. Editing the image and gif sizes. I was able to solve this by adding the width and height of images to fit my ideal size
2. Linking my website to my email and an image. I used this tag to do so `<a href="mailto:sonniamasha@gmail.com"><img src="email.png" /></a>`
